Introduction

As the 2022 Olympic and Paralympic Winter Games have been going on the way. And the winter sports competing will be hold in Beijing downtown area, its northwest Yanqing district and co-host Zhangjiakou, Hebei province at the beginning of the spring. The man-made ice and snow have been creating by snow makers and ice makers, the machines operated by man which must be supported by Freon, the dichlorodifluoromethane. As the temperature is not ice enough to made natural ice and snow.

The basic Olympic spirit is sports, health promotion and friendly communications by the world. But the winter Olympic 2022 in Beijing has been being under man-made snow and ice must not green and natural. Which must live under the Freon pollution and damaging to the space and environment.

The reports said. [1]Beijing Winter Olympics boost China's ski industry. China has big plans for skiing as a casual leisure activity. Today it has nearly 800 ski resorts, including indoor centers that will take 3,000 people. The industry chalked up 20.76 million skier days in the 12 months from April 2020. The Chinese government aims to get 300 million Chinese involved in winter sports. But eighty per cent of these 800 ski resorts were on man-made snow. Now in China, apart from western and northeastern provinces in winter can have natural ski resorts. Near all other parts of China wanting ski resorts must build man made ski resorts with manmade snow and ice. The western and northeastern provinces in China also must build man made ski resorts in spring, summer and autumn. While the snow makers and the ice makers must spend Freon to make ice and snow. The 640 (800X0.8) ski resorts in China must emit lots of Freon and alike subjects into the air and space. As we have proved how bad and harmful the Freon and alike subjects have been causing to the man-kinds and the space.

We are sure that Chinese related official departments must not have the statistics data how many the Freon and alike subjects into the air and space in this aspect. How we can strive for green and health China and green and health Earth or space? How we support and promote Olympic spirit? How we practice "Together for a Shared Future", the motto of Beijing Winter Olympics Games and Paralympic Winter Olympic Games 2022?

At this occasion, I must propose that the man made ski resorts and the manmade snow or ice under spring like Beijing Winter Olympics Games and Paralympic Winter Olympic Games 2022 must be reformed. The proposals are as follow.

1. All the national and world level sports events, especially the Olympic Games in the winter and summer must be hold under natural conditions.
2. All the national and world level sports events, especially the Olympic Games in the winter and summer should set up and add the same part motto of "Together for a Shared green and health Earth Future".
3. All the national and world level sports events, especially the Olympic Games in the winter and Summer must not produce prevention possible environment pollution.
4. The economic and commercial pursuing under the national and world level sports events, especially the Olympic Games in the winter and Summer must be green and healthy.
5. All the masses exercise and leisure sports and physical training must be green and healthy.
6. International cooperation and exchanges for sports green and healthy and every international sports committees for sports green and healthy is their basic aims.
