Abstract:

According to media reports, South African specialists have expressed that the B.1.1.529 virus (Omicron variant) mutates twice as much as the Delta variant and the key protein on the surface of the virus, the spike protein, has shown at least 32 mutations. Not only is the omicron variant more infectious than the Delta variant, but it also decreases the effectiveness of vaccines. Ever since the appearance of the Omicron variant, the number of daily infected cases in South Africa has risen by 100, 10 times increase. Furthermore, with the monitoring process in Africa being subpar, the number may be an underestimate.

Key words: delta variant; L-histidine; hydrochloride monohydrate; magnesium chloride

Introduction:

Monohydrate • *MLR, aliWcti- 80 (Polysorbate 80) • (EDTA-2Na)

The vaccine includes L-Histidine, L-Histidine hydrochloride monohydrate, Magnesium

Chloride, Polysorbate 80, Ethanol, Sucrose, Sodium chloride, and EDTA-2Na. Firstly, there is a recent occurrence of allergic reactions to vaccines! The lymph node is the first line of defense against bacteria, viruses and irregular Antigen stimulation, similar to a warrior fighting and braving the odds on the front lines. When the source of infection enters the body, the respiratory tract becomes the first to be infected. The T cells in neighboring Lymph node begin to secrete hormones that stimulate the growth of B cells.

The increase in antibodies from the B cells results in the swelling of the lymph node. In fact, there are two types of lymph node swelling: the first is tangible swelling in areas of the neck, groin, armpit and elbow, with the neck swelling being the most common. This type of swelling is easily discovered and diagnosed. The second type of swelling is hidden beneath the visceral layer and occurs around Mediastinal vessels and Abdominal intestine. This type is not easily diagnosed and once Visceral lymph nodes swell, the condition calls for hospitalisation. Secondly, the reaction of vaccines towards bacterial or virus infections often results in swelling! Since the COVID-19 vaccine provides immunity, similar reactions occur. The swelling is often situated in the proximity of the site of the injection. For example, swelling can occur at the left armpit if the vaccine is

administered on the left arm. As mentioned previously, swelling of lymph nodes caused by vaccines is not rare. But how does this affect the spread of Omicron? Different experts have various takes, but according to preliminary estimations from epidemiologist Dave Greenidge, the RO value is at 50, implying that a single person can affect up to 50 people. Another epidemiologist James Weiland uses modeling data to calculate that the Omicron variant is 500% more infectious than the initial variant from Wuhan.

Third, injection of the Covid-19 vaccine is the cause of virus mutations! Water is an important component of the human body. Blood, lymph fluid and excretory materials are related to water. In fact, 90% of blood is made up of water. Processes such as eating, swallowing, digesting, transportation of nutrients, and excretion require water to be carried out successfully. Water takes up 50-60% of an adult's body weight and 70-75% that of a child. The percentage of water in the body typically decreases with age. Water transports nutrients and oxygen to tissues and organs as well as removes excretory materials such as urea and carbon dioxide via the kidney and lungs respectively. In cell tissues, water participates in all metabolic hydrolysis reactions, and also has the function of regulating the acid-base balance in the body.

Fourth, further mutations of the virus caused by the interlaced spread of droplets! The proportion of water in the lymph nodes is 94%. most of the water in the lymph nodes is lymph fluid. Lymph fluid accounts for about 1 to 3% of body weight, and its composition is somewhat similar to plasma, but it does not contain red blood cells and platelets. Lymph fluid

contains water, protein, cell residues and pathogens, etc. After passing through the lymph nodes, it will be filtered and cleared of pathogens and toxins. 70% of the human body is water. Do you know which organ contains the most water? The water content of the blood is 83%: the water in the blood is responsible for the transportation, and the exchange of substances between the capillary, tissues and the external environment, such as the transportation of various substances and heat between the tissue cells of the whole body and the lung, kidney, and skin. In addition, the constancy of the internal environment is also maintained, and the blood buffers the changes caused by some acidic metabolites.

Fifth, drinking organic water is the solution to virus mutation! Tap water is mostly disinfected with chlorine or sodium hypochlorite. When chlorine is dissolved in water, it will become hypochlorous acid or hypochlorite ion, which is commonly known as effective residual chlorine. Since hypochlorous acid has a very high oxidizing ability, such as tap water containing residual chlorine, it can prevent the growth of bacteria (pathogenic bacteria) while staying in the water distribution pipe. Therefore, the effective residual chlorine plays an extremely important role in the safety and sanitation of tap water. The free effective residual chlorine content of this mineral drinking and drinking water quality standard is 0.2-1.0 mg/liter.

The anti-epidemic infection of the mineral functional drinking water is in violation of the Food Safety and Sanitation Management Act in order to avoid the declared efficacy of food. This mineral functional drinking water does not violate the Food Safety and Sanitation Management Act. The world's first unique practice of mineral functional drinking water for the human body is to add various minerals, such as titanium dioxide, sulfur ore, and physically ground nano-film to drink and drink water "The life science of drinking water with mineral function" applied for a medical manufacturing invention patent in the United States and Taiwan. "Physically ground nano-TiO₂ film into the water group key burst function water" can enter the lungs through the respiratory tract, and the dietary water and oral fluid can invade the blood of the human body. The cell channel bursts into the blood cells to metabolize and excrete the virus. The mineral content of mineral functional drinking water is based on international testing safety and health standards.

"Nano-thin film mineral functional drinking water" "Physically ground nano-film TiO₂,

Sulfur Mine, etc." can enter the lungs through the respiratory tract and enter the human blood cell channel through oral fluid and burst. Incoming blood cells strengthen the immune system of the internal organs and catabolize viruses to eliminate them." If "people across the country drink this functional water every day, in addition to strengthening their own immune antibodies, and thus forming a national community of people's epidemic prevention." Those diagnosed with "severe illness" will have different water absorption depending on the age, middle, young and young. Drink Add 1,000cc to 2,000cc of water." Drinking mouthwash and drinking at any time, metabolism, perspiration, and urination can turn positive and negative after one week. "Mild" diagnosed patients have different water absorption depending on the old, middle, young and young. "100cc of mineral film functional water with 1,000cc to 2,000cc

of water" every day cough, drink, drink, perspiration and urinate at any time for a week. The benefit of turning yang from yang to yin afterwards. Relevant countries' economy and people's livelihood, such as restaurants, restaurants, schools, factories, companies, and groups for family life, must provide "10cc to 20cc mineral film functional water plus 1,000cc to 2,000cc water" to drink and drink functional water at any time to achieve Stop the spread of each person's inhalation and oral fluids.

The new coronavirus has been mutated and then mutated. After the most severe mutant strain was discovered in South Africa, it has aroused global attention, and governments of many countries have rapidly upgraded their epidemic prevention efforts. This means that the effects of vaccines and drugs developed against known viruses and mutant strains may be affected. Every time a new coronavirus infects the human body, it is the result of the SARS-CoV-2 virus constantly replicating itself. Every time it replicates, it has to replicate its own genome. Small errors may occur during the replication process. Therefore, the new genome may be the same as before. It is slightly different. This is where the virus first contacts human cells, making it easier for the virus to enter the cell and mutate. This will give the virus more advantages and make the developed vaccines and drugs ineffective, which makes it difficult to estimate the economic loss.

Conclusion:

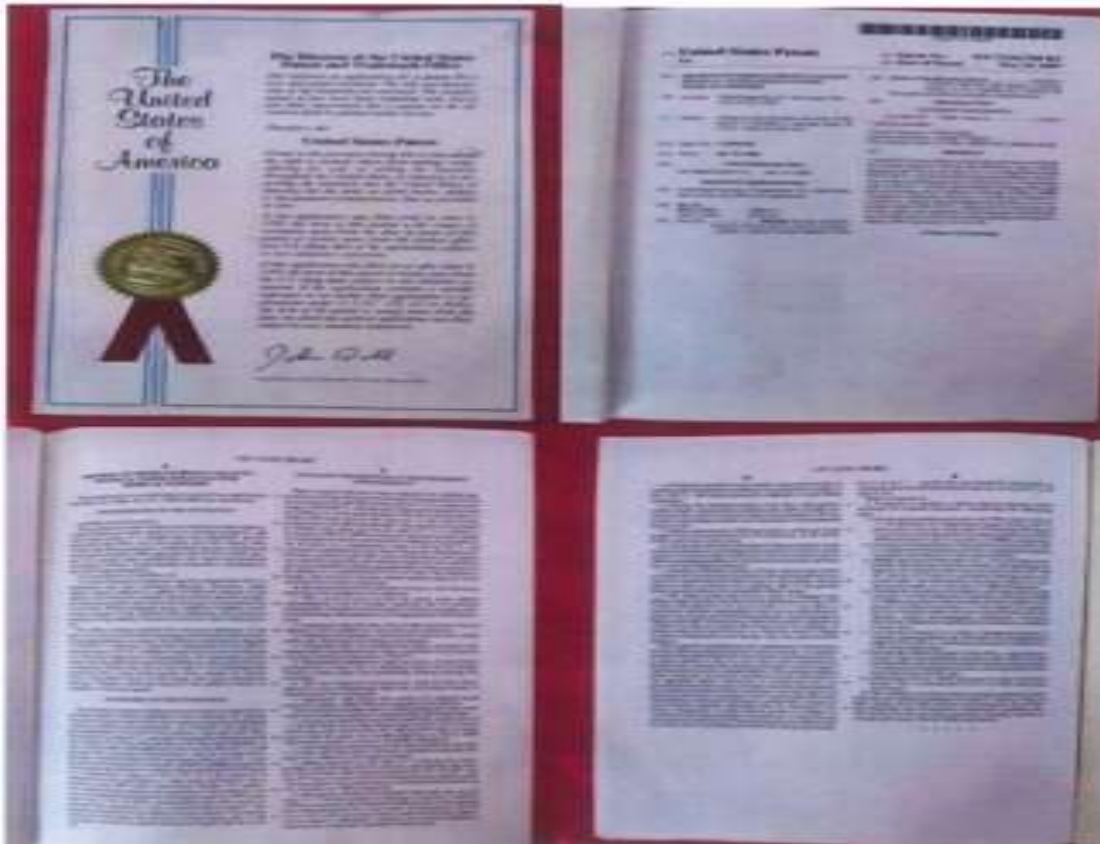

Water is an important component of the human body. Just like blood and lymph nodes are the human body to resist bacteria, the standard of drinking water quality is 0.2-1.0 mg/L of free effective residual chlorine. Among the more than 900 chemical substances that have been announced for water content, the infectious genome of the new coronavirus cannot be removed, so that the omicron mutant vector is difficult to prevent the epidemic. It is necessary to add various minerals, such as titanium dioxide and sulfur minerals, to the "nano-film mineral functional drinking water". Physically grinding the nanofilm into the lodging water mass. Drinking water increases the water, protein, cell residues and pathogens in the lymph fluid, which will be filtered and removed by the lymph nodes to remove pathogens and toxins.

If "the people of the whole country drink this functional water every day", in addition to strengthening their own immune antibodies they can form a national people's epidemic prevention community and prevent the invasion of omicron and other mutant strains. And resume the opening of domestic and foreign business activities and drive tourism bubbles, and enjoy the economic miracles brought about by business activities and tourism bubbles due to drinking mineral functional drinking water.

This "Nano-film mineral functional drinking water" is very willing to accept the highest standards of testing, inspection, verification and other certifications from the highest sanitation agency of the Singapore government! Book 1 to 5 "Nano-film mineral functional drinking water"

Daily "200cc mineral function" Add 1,000cc to 2,000cc of water to drinking water" at any time, soak mouth, drink, body metabolism, perspiration, and urinary, which can turn

positive and negative after one week. This "Nano-film mineral functional drinking water" A new variant emerges in Africa! More evolved and infectious than the Delta variant AnilsEgis.

Three injections of the vaccine (infection breakthrough infection) No vaccination (will the infection be re-diagnosed?) No infection vaccination to prevent death from side effects, vaccination (breakthrough infection, death from illness) Threat?

This "Nano-film mineral functional drinking water" r omicron the symbiosis and elimination of "Omicron mutant strain" is to prevent the virus from drinking water and metabolize the virus! The European and American vaccination policy is sufficient! Four doses of reinforcing

injections, inoculation of complex brands, and mixed vaccines can improve efficiency and make the body's vaccines diversified. The spread of attacks is difficult to control the epidemic.

If "the people of the whole country drink this functional water every day", in addition to strengthening their own immune antibodies, they can form

a national people's epidemic prevention community and prevent the invasion of omicron and other mutant strains.

Completely solve the serious COVID-19 novel coronavirus infection to drink natural functional water. Taiwan community tap water drinking water pipeline control is added from domestic drinking water (natural function mineral film thin water epidemic prevention). Lymph node water ratio 94%: Most of the water in lymph nodes is lymph fluid. Lymph accounts for about 1 to 3% of body weight, and its composition is

somewhat similar to plasma, but it does not contain red blood cells and platelets. Lymph contains water, protein, cell residues and pathogens, etc. After passing through the lymph nodes, it will be filtered to remove pathogens and toxins. 70% of the human body is water, do you know which organ has the most water? The blood water ratio is 83%: the water in the blood is responsible for the transport, and the material exchange is

carried out in the capillary, the tissue and the external environment, for example: the transport of various substances and heat between the whole-body tissue cells and the lungs, kidneys, and skin. In addition, the body

environment is also maintained constant, and the blood buffers the changes caused by some acidic metabolites.
