Abstract

Any entity containing coordinated microzymas is alive. Such an entity dies when the constituent microzymas absolutely cease to coordinate.

Key words: microzymas; microzymas

1. Any entity containing coordinated microzymas is alive
2. Such an entity dies when the constituent microzymas absolutely cease to coordinate.
3. Improperly arranged or inappropriately coordinated microzymas imply ill health

Science fiction has long predicted that someday human beings will be preserved and ageing stopped or significantly slowed for long voyages into distant planets and galaxies etc. So far scientists are focusing on using lower temperatures and other means. I humbly postulate that they are going about it the wrong way, which is why they have not succeeded.

There is only ONE major challenge that needs to be surmounted to preserve life indefinitely and stop ageing. The microzymas/cellular dust of the individual must be constrained to remain in perpetual condition in an ideal state.

Ready to submit your research? Choose Auctores and benefit from:

- fast, convenient online submission
- rigorous peer review by experienced research in your field
- rapid publication on acceptance
- authors retain copyrights
- unique DOI for all articles
- immediate, unrestricted online access

At Auctores, research is always in progress.
